UniformDesk

Supplier meeting walkthrough · Demo logins · Day-to-day ops

Supplier-led uniforms for Kenyan senior schools — catalog, deliveries, co-issue, reports & print

Demo password for all seed accounts: **desk1234**

Contents

- Part A — Supplier meeting walkthrough (~20–25 minutes)
- Part B — Desk & supplier operations reference
- Part C — Quick route map & print notes

App URL for live demo: **http://localhost:3000** (or your hosted demo URL).

Part A — Supplier meeting walkthrough

Use this script to take a supplier through the live product. Time: ~20–25 minutes live · ~10 minutes if you skip print demos.

Demo accounts

Who	Email	Use for
Supplier admin	supply@uniformdesk.co	Full supplier story (create school, branding, catalog)
Supplier staff	staff@uniformdesk.co	Day-to-day ops (no branding)
School reporter	report@greenfield.school	Optional: school receive / stock take

Seed school codes: **GFS** (Greenfield), **RVA** (Riverside). Password for all: **desk1234**.

One-sentence pitch

UniformDesk is **supplier-led**: you own the catalog, link schools, deliver stock, co-issue on admission day, invoice, and see issued + campus stock — while the school reporter runs stock take and receives delivery notes.

Suggested agenda (click path)

1. Sign in as supplier admin (2 min)

- 1 Open /login → supply@uniformdesk.co / desk1234
- 2 Land on Supplier home (/supplier)
- 3 Point out: co-issue, schools, reports, deliveries, invoices

Say: "This portal is yours. Schools get a simpler desk for issue and stock."

2. Schools portfolio (3 min) — /supplier/schools

- 1 Show linked schools (GFS / RVA cards)
- 2 Create school (admin only): name + code + reporter login — or link by code
- 3 Open Co-issue from a school card

Say: "Each school is a separate tenant. You only see schools you create or link."

3. Catalog (2 min) — /supplier/catalog

- 1 Show SKUs, sizes, prices
- 2 Emphasize: SKU must match what the school receives into stock

Say: "Your catalog drives deliveries and invoices. Matching SKUs keep receive clean."

4. Orders → Delivery note → Invoice (5 min)

- 1 Orders (/supplier/orders) — create / open a PO for a linked school
- 2 Deliveries (/supplier/deliveries) — pack / dispatch DN
- 3 DN detail — lines, status → Print DN
- 4 Invoices — invoice from delivery → Print invoice

Say: "Paper packs print from the browser — compact A4 portrait. School receives the DN into stock."

5. Co-issue on campus (5 min) — /supplier/issue

- 1 Pick linked school (if more than one)
- 2 New student or find roster student
- 3 Load kit / adjust lines
- 4 Payment method + reference (no amount)
- 5 Confirm issue → Still owed for incomplete kits

Say: "Same issue flow as the school desk, against that school's stock. Slip stays on the school; you are the issuer."

6. Supplier reports (3 min) — /supplier/reports

- 1 Select school if needed
- 2 Issued today — who got what, payment ref, issuer
- 3 Stock on hand — read-only campus balances (school does stock take)
- 4 Print report on the active view

Say: "Daily visibility without owning their stock take."

7. Branding & staff (2 min) — admin only

- 1 /supplier/branding — name, mark, accent, support contacts
- 2 Staff login staff@uniformdesk.co — same ops, no branding menu

8. Close (1 min)

- 1 Recap the supplier loop below
- 2 Offer next steps: real school codes, branding assets, go-live checklist

Supplier loop

Create/link school → Catalog → Order/DN → School receives
→ Co-issue at admission → Still owed → Reports + Print
→ Invoice & collect

Talking points (objections)

Question	Answer
Do we replace the school system?	No — school reporters keep issue, stock take, receive. You own supply + co-issue.
Can we see other suppliers' schools?	No. Only schools you create or link.
Who owns stock numbers?	The school. You view balances; they adjust / stock take.
Parent slips?	Not required. Method + reference only for audit.
Printing?	Browser print on reports, still owed, DN, invoice — A4 portrait, compact standard.

Part B — Desk & supplier operations

Day-to-day operations for school reporters and supplier staff.

Roles at a glance

Role	Owns	Typical work
supplier_admin	Server, catalog, school links, branding	Catalog, schools, deliveries, invoices, co-issue, reports
supplier_staff	Ops under the supplier	Pack/dispatch, invoices, co-issue, reports
school_reporter	Campus stock & admission issue	Issue desk, stock take, receive DN, campus reports

School purchase routes (orders / reorder / school invoices / catalog admin) are retired — supply buying stays on the supplier side.

School desk

Issue (/issue)

- 1 Find or key in a student (admission no, name, class).
- 2 Choose kit / lines and quantities.
- 3 Record payment method + reference (no amount).
- 4 Confirm — no parent signature / slip required.
- 5 Stock decreases; shortages open Still to receive.

Still to receive (/incomplete)

- Queue of incomplete kits.
- Issue what's left returns to the issue desk for that student.
- Print list for a paper follow-up queue.

Stock (/stock)

- On-hand balances + recent ledger.
- Stock take / adjust with a reason (e.g. Stock take, Damage).
- Print stock for counting sheets.
- Supplier can view these balances (read-only) under supplier reports.

Reports (/reports)

- Issued today (with payment method/ref when recorded).
- Shortage lines and audit CSV export (when role allows).
- Print report — browser print; nav and export form are hidden.

Deliveries (/deliveries)

- Receive against a supplier DN (posts ledger).
- Print DN on the detail page.

Supplier portal

Co-issue (/supplier/issue)

- Same admission flow as the school desk, against a linked school's stock and roster.
- Slip stays on the school; issuer is the supplier user.
- Use when supplier staff are on campus at admission.

Reports (/supplier/reports)

View	Contents
Issued today	Who received what, payment method/ref, issuer

View	Contents
Stock on hand	Read-only campus balances (school does stock take)

- Summary: issued today, still owed, stock lines, low stock.
- Still owed (/supplier/incomplete) — incomplete kits + Print list.
- Print report prints the active view plus summary.

Supply documents

Document	Where	Button
Delivery note	/supplier/deliveries/[id]	Print DN
Invoice	/supplier/invoices/[id]	Print invoice

Part C — Routes, printing & audit

Quick route map

Need	School	Supplier
Issue uniforms	/issue	/supplier/issue
Incomplete kits	/incomplete	/supplier/incomplete
Stock / stock take	/stock	View via /supplier/reports → Stock
Daily reports	/reports	/supplier/reports
Receive / pack DN	/deliveries	/supplier/deliveries
Invoices	—	/supplier/invoices
Schools / create	—	/supplier/schools
Catalog	—	/supplier/catalog
Branding	—	/supplier/branding (admin)

Printing

- 1 Open the report or document.
- 2 Choose school / view if needed (supplier).
- 3 Click Print report, Print list, Print stock, Print DN, or Print invoice.
- 4 Use the browser print dialog (PDF or paper) — A4 portrait, compact standard layout.

Printed pages include a title banner (tenant, school, timestamp). Screen-only chrome (nav, school picker, view toggles, CTAs) is hidden.

Payment & audit notes

- Desk payment stores method + reference only — no live payment rails or amount field.
- Internal issue records remain for stock, still-to-receive, and staff audit.
- School /reports can export a CSV of issue lines (date range) for auditors.

Multi-tenancy (one line)

Shared database with row-level isolation by school and supplier. Users belong to one side. Suppliers only access schools they create or link (SupplierSchool). Isolation is enforced in application layouts and queries.
